Login page obtains list of courtesy Logins from provider. Presents selector.
Login page on successful auth. invokes UserData with authenticated login.
UserData obtains list of courtesy Logins, detects the one authenticated.
If exists Login for authenticated
then UserData builds list of IdentityActivation of all Login.ApplicationLogin
UserData obtains the local saved active applicationKey-identityKey
UserData sets the active flag of the IdentityActivations from saved flags.

Page IdentitiesFilter presents on/off
switches exposing the active flag of all the
IdentityActivation in UserData (read/write).
